JAPAN.

*Reports from Yokohama—Cholera at Tokyo, Fukuoka Ken, and Kobe.*

YOKOHAMA, JAPAN, *July 15, 1902.*

SIR: I have the honor to transmit herewith abstract of bills of health for the week ended July 12, 1902. Two vessels were inspected with a total personnel of 182 crew and 100 passengers.

During the past week the local newspapers reported a death from cholera in Yokohama, which report, however, was later denied; the official statement for the week ended July 12 shows this city to be free from quarantinable disease. A death from cholera occurred in Tokyo on the 9th instant. The disease in that city seems to be, for the time, under control.

Fukuoka Ken, a prefecture in the island of Kyushu, has furnished the bulk of the new cases of cholera reported in Japan during the past week, its total up to July 10 being 74 cases with 44 deaths in addition to 27 cases with 12 deaths resulting from the outbreak in Fukuoka prison, and 43 cases now regarded as merely doubtful or suspicious. A considerable number of the emigrants now passing from Japan to Hawaii at the rate of more than a 1,000 monthly, come from the above-mentioned prefecture, and it has seemed proper to hold them under observation for five days at this port before shipping. At a conference with leading Japanese sanitary officials, brought about through the courtesy of United States Minister Buck, the propriety of administering prophylactic inoculation to emigrants for the United States from cholera-infected districts, was suggested. I mention this fact as illustrative of the confidence with which the anticholera vaccine is regarded in Japan.

Three of the cases reported from Fukuoka Ken (all fatal) are credited to Moji, a considerable shipping town. Cholera exists at Kobe.

Respectfully,

DUNLOP MOORE,  
*Assistant Surgeon.*

The SURGEON-GENERAL.

YOKOHAMA, JAPAN, *July 22, 1902.*

SIR: I have the honor to transmit herewith abstract of bills of health issued at this office during the week ended July 19, 1902. There were inspected 4 vessels, with a total personnel of 307 crew and 887 passengers; 502 steerage passengers and 22 crew were bathed and 525 pieces of baggage were disinfected by formaldehyd. Fortunately, though many of the most important Japanese seaports are now infected by cholera, Yokohama is officially declared free from quarantinable disease. The newspapers recently announced a case of cholera as occurring in Kanagawa Ken, the prefecture in which Yokohama is situated, but this report has not been officially confirmed to me.

Respectfully,

DUNLOP MOORE,  
*Assistant Surgeon.*

The SURGEON-GENERAL.

*Cholera at Okayama.*

DEPARTMENT OF STATE,  
*Washington, D. C., August 9, 1902.*

SIR: I have the honor to advise you for the information of the Public Health and Marine-Hospital Service, that the Department is in receipt
